

One Stop Medical Center of Twin Cities Now Offers Affordable No Scalpel Vasectomy With Only One Trip

Summary: *Fear of pain, cost, and time are three major factors that deter men from having a vasectomy. One Stop Medical Center now offers an affordable, pain-free, no-scalpel, no needle vasectomy with only one trip.*

Minneapolis, MN (August 2014) – A vasectomy has long been known to be the most effective and affordable way for a couple to pursue long-term contraception. Moreover, no-scalpel vasectomy has many proven advantages over conventional vasectomy. Still, many men hesitate to have their vasectomy done due to three factors: fear of pain, cost, and time. In order to eliminate these three road blocks, One Stop Medical Center in the Twin Cities, Minnesota has developed an affordable, virtually painless, and convenient vasectomy care system.

The number one objection voiced by the male to having a vasectomy done is the fear of pain. The innovative new surgical techniques of the no scalpel vasectomy greatly minimize trauma and pain by only making a small, single punch in the skin of scrotum, as opposed to a conventional, more invasive open procedure. Madajet is a spray applicator that delivers a fine stream of anesthetic at a pressure great enough to penetrate the skin and envelop the vas deferens tube beneath the skin with an almost 100% efficacy rate, eliminating the need for additional anesthetic. By offering no needle and no scalpel techniques for a vasectomy, One Stop Medical Center in the Twin Cities has mitigated the pain of the procedure and the fear that comes with it.

Cost is the second hurdle for men who want a vasectomy. One Stop Medical Center cuts the price of no scalpel vasectomy in half. This way, more men can afford to have their vasectomy done, Says Dr. Steven Shu, medical director of One Stop Medical Center. We also simplified the whole vasectomy care system to create a more friendly and convenient system."

One Stop Medical Center has developed a powerful website with a plethora of information on vasectomy and vasectomy reversal. All patients are required to review important vasectomy information and watch a consultation video. Dr. Shu will finalize the consultation on the same day of surgery, so the patients don't need another trip for the consultation.

Traditionally, the patients need to bring the specimen for semen analysis three months after surgery. At One Stop Medical Center patients can simply mail their specimen to our office.

About One Stop Medical Center and Dr. Shu

One Stop Medical Center provides a wide range of office procedure services that emphasize minimal invasion and local anesthesia, including vasectomies and vasectomy reversals. It offers the most extensive range of state-of-the-art technologies with equipment serving every area of office surgical procedures.

Dr. Steven Shu, MD, MBA, is a board certified laser surgeon who specializes in office procedures. Dr. Shu was an assistant professor in the University of Minnesota medical school from 2006 to 2012, teaching no scalpel vasectomy and other office procedures. Dr. Shu has adopted countless revolutionary techniques to achieve ideal results with more efficiency, affordability and safety.
