

## One Stop Medical Center Offers New Promotional rate \$1990 for an Affordable Vasectomy Reversal Service

**Summary:** The expense of vasectomy reversals is an important factor that discourages couples wanting to have another child. One Stop Medical Center now offers new promotional rate \$1990 for an affordable vasectomy reversal service, helping couples conceive children naturally.

MINNEAPOLIS, MN (SEPTEMBER 17, 2016) - There are approximately half a million men who undergo a vasectomy every year in the U.S. There are several reasons why some would want a vasectomy reversal. Life changes can lead men to rethink their choices regarding having children. Some men remarry and want to have a child with a new wife, couples may lose a child, or couples who thought they were done having children but have changed their mind. Whereas the cost of vasectomies is usually less than \$1000 and are covered by most insurance companies, reversals are not, so couples have to pay for the expensive procedure with cash. If the reversal is performed in a hospital or surgical center, this, in turn, accelerates the cost, further discouraging couples wanting to have another child.

One Stop Medical Center has been offering an Affordable Vasectomy Reversal Service since the creation of the Vasectomy & Reversal Center of Minnesota 4 years ago. Now One Stop Medical Center Offers New Promotional rate \$1990 for a vasovasostomy procedure. The medical director, Dr. Steven Shu, is an expert in office procedures who is dedicated to helping couples conceive children naturally, and he performs about 150 vasectomy reversal procedures every year. The clinic charges only \$110 for a consultation and \$1990 for a vasovasostomy (VV) procedure. The aim of vasovasostomy is to reconnect the vas where it was severed at the time of vasectomy, making it a true reverse vasectomy, which makes the most sense for men whose intervals are short (less than 10 years vasectomy) .

Vasovasostomy (VV) takes about two hours. It is performed under local anesthesia, similar to the anesthesia used for vasectomy but with a longer-acting drug. Continuity of both vas tubes can be restored through a single small incision. Magnification is accomplished with either a surgical microscope or optical loupes, the high-power glasses used by gem-cutters and by cardiac surgeons when bypassing the small coronary blood vessels.

One Stop Medical Center developed a powerful website, EZvasectomy.com, with rich information on vasectomy and vasectomy reversal. Its online registration allows patients to conveniently prepare for their visits and office procedures in advance, using either their computers or their mobile devices.

About One Stop Medical Center and Dr. Shu:

One Stop Medical Center provides a wide range of office procedure services that emphasize minimal invasion and local anesthesia, including vasectomies and vasectomy reversals. OSMC offers the most extensive range of state-of-the-art technologies in the state of Minnesota, with equipment serving every area of office surgical procedures.

Dr. Steven Shu, MD, MBA, is a board certified laser surgeon who specializes in office procedures. Dr. Shu was an assistant professor in the University of Minnesota medical school from 2006 to 2012, teaching no

scalpel vasectomy and other office procedures. Dr. Shu has adopted countless revolutionary techniques to achieve ideal results with more efficiency, affordability and safety. For more information, visit <http://www.EZvasectomy.com>, <http://www.procedureclinic.com>.
